Migrate Magento 1 data to Magento 2

Requirement: RapidFlow Pro

1. Create export profiles of type:
    1. EAV - mark all possible codes for export
    2. Products - if you need to transfer images, make sure to set Export images setting to Yes
        1. export only category.name option, all three category columns can cause problems in same import
    3. Products Extra - mark all possible codes for export except CC
2. Edit EAV export, replace all Magento 1 class aliases in EA, EAX and EAXP codes with Magento 2 class names
3. Create EAV import profile on Magento 2, with the file from Magento 1 export
4. Import EAV data, make sure all attributes are correctly created.
    1. if you have third party modules on Magento 1 which add attributes, make sure to install them on Magento 2 as well
    2. if you do not plan to use any of those third party modules, make sure to remove their attributes from EAV export files
5. Create Products import on Magento 2, with the file from Magento 1 export.
    1. probably will need to enable auto create category option and auto create dropdown values option.
    2. if transferring images, make sure to copy the files into Magento 2 var/urapidflow/import/images folder
6. Import Products data, make sure to reindex all product related indexes.
7. Create Products extra import on Magento 2, with the file from Magento 1 export.
8. Import PRoducts extra data
9. Make sure products are listed correctly.
