

# How to run the same profile using different file names

urapidflow.php

```
<?php
```

```
// Load profile object by name  
$profile = Mage::getModel('urapidflow/profile')->load('Profile',  
'title')->factory();
```

```
// Run the profile using the first file  
$profile->setFilename('file1.csv')->start()->save()->run();
```

```
// Run the profile using the second file  
$profile->setFilename('file2.csv')->start()->save()->run();
```
