

Export Currency Formatted Numbers

[urapidflow.php](#)

```
<?php

// initialize Magento environment

include_once "app/Mage.php";
Mage::app('admin')->setCurrentStore(0);

$helper = Mage::helper('urapidflow');

// run profile using name (this profile exports to
var/urapidflow/export/products.csv):

$helper->run("Export Products");

// post-process the file to format currency (stream for lower memory
footprint):
// (assuming that the script is in magento root folder)
// in this example column 5 (starting from 0) is the price that need to
be formatted

$from = fopen('var/urapidflow/export/products.csv');
$to = fopen('var/urapidflow/export/products1.csv');
while ($row = fgetcsv($from)) {
    $row[5] = number_format($row[5], 2, ',', ' ');
    fputcsv($to, $row);
}
fclose($from);
fclose($to);
```
